

Software Test Management, Planning, and Measurement

Learn how to achieve a consensus on important test strategy issues such as resource allocation, risk prioritization, automation, and more. This course is appropriate for Test Managers, Test Leads, and experienced testers tasked with developing testing strategy for their organization.

- Discuss the importance of corporate culture and the economics of test and failure
- Learn proven test planning methods and techniques
- Learn to create customized Master Test Plans and Level-specific plans
- Explore the issues that affect the test strategy
- Discover a practical risk analysis technique to prioritize your tests
- Examine methods for measuring the test effectiveness of your organization
- Learn a set of estimating techniques to assist in your test planning

The Appropriate Test Strategy is Key

Test planning is essential to the success of any testing effort, but what really matters is the thought process used to create the test plan rather than the document itself. Communications and agreements reached during the creation of the test plan ultimately determine the success of the testing effort. This course focuses on how to achieve a consensus on important test strategy issues such as resource allocation, scheduling, risk prioritization, exit criteria, automation, etc.

A Proven Approach to Measurement

While good planning is vital, measuring our ability to execute those plans is equally important. This course presents the characteristics of good metrics, how to select the ones helpful for your project, and how to create a dashboard to track your execution of your plans. In addition, it presents a number of estimation techniques helpful in the planning process.

Who Should Attend?

This course is appropriate for Test Managers, Test Leads, experienced testers, and Project Managers who are concerned with developing a testing strategy for their organization. It is software methodology agnostic and focuses on the key thought processes necessary for planning, measuring, and estimating testing.

Course Outline

Testing and Quality

Quality & Testing
Economics of Failure
Software Lifecycles
ISTQB Testing Principles
Testing Levels

The Test Manager

Leader
Communicator
Politician
Salesperson
Technician
Detective

Test Teams

Test Case Design

Black Box Testing
Equivalence Class Testing
Boundary Value Testing
Decision Table-based Testing
State-Transition Diagram-based Testing
Exploratory Testing

Execution Management

Test Logs
Status Reports
Retrospectives

Metrics

Attributes of Good Measures
Software Measurement

Tester's Concerns

Test Team Organizations

Characteristics of a Good Tester

Staff Development Techniques

Certifications

Master Test Plan

Details of the Master Test Plan

Why Planning is Not Successful

Common and Uncommon Metrics

The Human Element

Measuring Testing Effectiveness

Establishing a Testing Dashboard

Estimation

Why Estimates are Inaccurate
